

DESIGN & PRODUCT DOCUMENTATION

Enrollium

A multi-tenant University AI Admission Assistant. This page documents the visual language, color theme, typography, component patterns and interaction behavior used across both the tenant-facing operator dashboard and the platform (super-admin) dashboard — plus a full inventory of every screen designed so far.

01 — FOUNDATIONS

Design principles

Enrollium reads as an admissions office, not a generic SaaS analytics tool. Every screen follows the same handful of rules.

-
- **Warm, not white.** Backgrounds are cream in light mode and warm near-black in dark mode — never pure white or pure black.
-
- **One accent, used sparingly.** Terracotta orange marks primary actions, links, the active nav item and the logo mark only — never large fills or decoration.
-
- **Cards float on a border, not a shadow.** A 1px border on the warm background is enough separation; drop shadows are reserved for the sidebar's hover-expand overlay only.
-
- **Serif for identity, sans for data.** Spectral (serif) appears only on the wordmark and page titles — the one place personality shows. Everything else, including KPI numbers, is Work Sans.
-
- **Status colors are muted and paired with text.** Green/amber/red never carry meaning alone — always next to a label or chip text.

Light & dark tokens

Every screen defines the same token set as CSS custom properties and switches theme by swapping the values — no component markup changes between light and dark. Use the toggle in the top bar to preview both.

03 — TYPOGRAPHY

Spectral + Work Sans

Two families, loaded once per screen via Google Fonts: Spectral for the small set of serif moments, Work Sans for everything else.

Wordmark Spectral · 600 · 19px	Enrollium
Page title Spectral · 600 · 26–27px	Tenant Detail
Card / section title Spectral · 600 · 14–15px	Usage limits
KPI value Work Sans · 600 · 22–27px	48,600
Body / table cell Work Sans · 400–500 · 12.5–14px	Al-Noor Institute of Technology
Label / eyebrow Work Sans · 600 · 10.5–11.5px · uppercase	ENROLLIUM PLATFORM
Muted caption Work Sans · 400 · 11–12px	Showing the last 9 actions across all platform admins

04 — COMPONENTS

Reused patterns

The same handful of building blocks — buttons, chips, tables, toggles, tabs, KPI tiles and warning banners — are copied verbatim across every screen rather than restyled per page.

TABLE ROW — HOVER TO SEE THE STATE

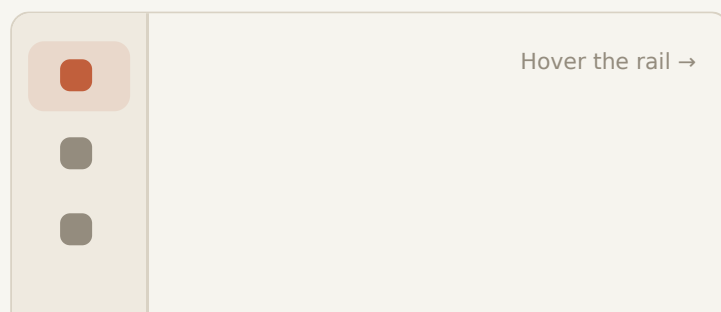

TENANT	PLAN	STATUS
Riverside Institute	Pro	Live
Askari College	Growth	Nearing limit
Horizon College	Starter	Suspended

05 — MOTION & INTERACTION

Animations we used

Enrollium is deliberately quiet: exactly one interaction carries a timed CSS transition. Everything else is an instant state swap — a flat design choice, not an oversight, so it's documented as such below rather than dressed up.

THE ONE REAL ANIMATION — SIDEBAR COLLAPSE → HOVER-EXPAND

The rail is a fixed 84px box. The sidebar itself is absolutely positioned at the same 84px width with `overflow:hidden`. On `:hover` it widens to 252px and gains a drop shadow:

```
transition: width 0.18s ease, box-shadow 0.18s ease;
```

Labels are plain elements that were simply hidden (`display:none`) at the collapsed width and revealed on hover — not faded in.

INTERACTION	BEHAVIOR	MECHANISM
Sidebar collapse / expand	Animated	<code>transition: width 0.18s ease, box-shadow 0.18s ease</code> on <code>:hover</code> , plus label reveal via <code>display: none → revert/flex</code>
Nav item / menu item hover	Instant	<code>:hover { background: rgba(ink,0.05) }</code> — no transition declared
Table row hover	Instant	<code>.er-row:hover .er-td { background: rgba(ink,0.02) }</code>
Tab underline (active state)	Static	<code>border-bottom: 2px solid var(--accent)</code> set directly on the active tab, not transitioned in
Toggle switch (on/off)	Two-state	Knob position is <code>left: 2px</code> vs <code>left: 17px</code> — swapped instantly, not slid
Modal / backdrop open	Instant	Shown/hidden by a conditional render (<code>sc-if</code>), not a CSS fade or scale-in
Buttons	None	<code>cursor: pointer</code> only — no hover transition currently defined
Charts / sparklines	None	Static SVG paths — no draw-in or hover animation

If you want to add motion later, the cheapest wins in priority order: a `150ms ease` background transition on hover states (nav, rows, menu items), a fade/scale-in on the modal backdrop, and a slide on the toggle knob. None of these exist in the current build.

06 — PAGE INVENTORY

Every screen designed so far

Two dashboards live in the same canvas project: the tenant-facing operator dashboard, and the internal platform (super-admin) dashboard.

TENANT DASHBOARD — OPERATOR VIEW

Sidebar	Persistent left nav, collapses to an icon rail and hover-expands (the one animated interaction).
Overview	Landing page — KPI summary and at-a-glance widgets for the tenant's assistant.
Conversations	Live list and detail view of conversations the assistant is handling.
Inbox	Escalations that need a human reply.
Leads	Prospective-student leads captured through conversations.
Unanswered Questions	Questions the assistant couldn't answer, queued for review and training.
Knowledge Base Editor	Manage the source content the assistant answers from.
Change History	Audit trail of edits made in the Knowledge Base Editor.
Settings	Tenant-level configuration.
Overview — New Tenant	Empty state shown before a tenant has completed setup.
Setup — Web widget	Embed and configure the website chat widget.
Setup — WhatsApp	Connect a WhatsApp Business number.
Setup — Sandbox	Test the assistant privately before going live.
Setup — Go live	Final launch checklist.
Sign in	Login screen.
Create account	Signup screen.

PLATFORM ADMIN DASHBOARD — SUPER-ADMIN VIEW

Tenants	Pending approval queue plus the full tenant table — approve, reject, suspend, reactivate.
Tenant Detail	Single-tenant profile: editable usage limits, billing, admin users, support notes.
Usage & Cost	Per-tenant conversations, AI requests, tokens and estimated cost, with nearing-limit flags.
Billing	Plan, price, cycle, payment status, manual invoicing tracking, MRR/ARR and failed-payment alerts. Extends beyond the V1.3 PRD, which defers in-platform billing to V1.4.

Tenant Support	Read-only viewer into a tenant's config (programs, fees, branding, channels) for troubleshooting — no impersonation.
Platform Health	Uptime, API error rate, queue depth, WhatsApp delivery failures, Sentry-linked incidents.
Settings	Platform-level settings: the admin's own account/2FA, global defaults for new tenants, sub-processors & DPA status.
Audit Log	Every action a platform admin takes — approvals, suspensions, limit and plan changes — timestamped.
Overview (unlinked)	An early draft overview page kept in the project file but not wired into the current nav.
